AIR SAFETY PRODUCTS

INCORPORATED

LIFE PACK

One or more Scurlock-Frost Air Safety Products, Model 100, Life Pack Air Inflated Rescue Cushions or equal.

The cushion shall be designed to help rescue persons that have to jump from heights of up to 100 feet.

The cushion shall be made of vinyl coated nylon 17/18 oz. per square yard material that does not support combustion. The material shall be abrasion resistant to 5000+ cycles and low temperature resistant to -40 F.

The cushion shall weigh approximately 285 lbs., and be capable of being rolled into a 3 x 5 ft. roll.

The Rescue Cushion shall be approximately 25 ft. long x 18 ft. wide, and 8 ft. high when inflated. The cushion shall be constructed with a 6 ft. upper section and a 2 ft. lower safety section, connected together and also interconnected by air feed holes. The lower safety section shall be relatively closed so that it will inflate to a higher pressure than the upper section. The upper section shall include normally closed breathers or quick air release structures which will keep the upper section from being inflated to as high a pressure as the lower section.

The breathers shall include two opposed mouth or lip-type breathers, and two opposed weighted flap-type breathers. All breathers shall be

INCORPORATED

LIFE PACK - page 2

biased by elastic straps appropriately tensioned and self closing. The breather systems shall allow quick, but controlled release of the air pressure build-up in the upper section upon impact (when a person jumps onto the Rescue Cushion).

The air breathing system shall be designed to reduce and control the deceleration of a person who has jumped onto the cushion from up to its rated height.

The cushion shall be inflated in not less than 80 seconds through the lower section by a continuously running fan system which includes a uni-flow flap check valve.

The design of the Life Pack Air Safety Rescue Cushion shall be tested from and above its rated height with dummy weights and an accelograph. The test results of the accelograph shall show that the maximum "g's" incurred during deceleration does not exceed the human endurance level. The design shall then be tested with a live person jumping from a height 25% higher than the rating of the cushion to prove that the Life Pack Rescue Cushion can and does save lives.
